PRODUCT SPECIFICATION

A Module-by-Module Blueprint for the WHPS Digital Enterprise Platform

Companion document to the WHPS Digital Enterprise Platform proposal

Build-Ready Specification Draft | August 2026

Table of Contents

How to Read This Document

This document turns the WHPS Digital Enterprise Platform proposal into a build-ready specification. Every module in the platform — from the public website through to Central Admin — is broken down the same way, using ten fixed dimensions, so engineering, design and WHPS stakeholders are working from one consistent structure.

The Module Chain

The platform is organised as a single chain of modules, each depending on the shared Central Data Platform rather than holding its own private data:

#	Module
1	Public Website
2	Customer App / Portal
3	CRM
4	Sales
5	Inventory
6	Branch Management
7	Franchise
8	HR + Recruitment
9	Finance
10	Procurement
11	Repairs
12	Custom Jewellery
13	Vendors / Karigars
14	Management Command Center
15	AI Intelligence Layer
16	Central Admin

The Ten Dimensions

Every module section answers the same ten questions, in the same order:

Dimension	What It Captures
Who Uses It	The roles that interact with this module, including customer-facing and internal users
Key Screens	The actual screens/pages a build team needs to design and construct
What They Can Do	The concrete actions available on those screens
Data Stored	The core entities and fields this module reads or writes
Approvals Required	Where a human sign-off gates an action, and who provides it

Dimension	What It Captures
Notifications Triggered	What gets sent, to whom, and on what event
Reports & Dashboards	What this module contributes to reporting and analytics
AI / Intelligence	Where AI assists, and what it is (and is not) allowed to decide on its own
Integrations	Which other modules or external systems this module depends on
Permissions & Access	Role-based access boundaries specific to this module

Governance carries over from the main proposal: AI recommendations are decision-support, not autonomous action, and every approval row below identifies a named human role — not a system — as the final authority.

1. Public Website

The unauthenticated, public-facing storefront and information layer — the first touchpoint for most customers, candidates and prospective franchisees.

Who Uses It	• Prospective and existing customers (anonymous browsing) • Marketing / content team (publishing) • SEO and campaign administrators
Key Screens	• Home, category and product listing pages with filters • Product detail page (weight, purity, making charges, availability) • Store locator, Gold Rate page, Appointment booking • Careers page and Franchise opportunity page • Blog / content pages, My Account login & signup
What They Can Do	• Browse, filter, search and compare products • Add items to wishlist; check store-level availability • Book a store appointment; request a callback or quotation • Apply for a job or a franchise; subscribe to updates
Data Stored	• Product catalogue (read from Central Data Platform) • Store directory and content pages • Enquiry / lead-capture form submissions • Newsletter subscriber list; SEO metadata
Approvals Required	• Content publishing requires Marketing Lead sign-off before go-live • Gold rate and pricing are not editable here — pulled read-only from the Gold Rate Engine
Notifications Triggered	• Enquiry / appointment confirmation to the customer (email, SMS, WhatsApp) • New enquiry alert routed to the relevant store or salesperson
Reports & Dashboards	• Traffic and conversion funnel by page and channel • Product page views and wishlist adds • Search terms returning no results (feeds Lost Demand in Section 9 of the platform blueprint)
AI / Intelligence	• Smart search and filtering • AI visual search — upload a photo, find similar products • Chat assistant widget for pre-visit questions • Personalised recommendations for logged-in visitors
Integrations	• Central Product Catalogue API • CRM (enquiry / lead push)

	• Appointment system, Gold Rate Engine • Web analytics, WhatsApp Business API
Permissions & Access	• Public — read-only browsing, no login required • Registered customer — account, wishlist, saved details • Content Admin — CMS edit rights, no pricing/master-data access • Marketing Admin — campaigns, SEO, content calendar

2. Customer App / Portal

The authenticated home for an existing WHPS customer — mobile app and the “My Account” web portal, both reading and writing to the same customer record.

Who Uses It	Registered, logged-in customers only
Key Screens	• Home / Explore, Wishlist, Orders & Reservations • Appointments, Gold Schemes, Loyalty • Repair tracker, My Certificates & Invoices • Profile & communication preferences, AI Assistant chat
What They Can Do	• Reserve or purchase products; track order and delivery status • Book, reschedule or cancel a store appointment • Enrol in or track a gold scheme; redeem loyalty points • Raise and track a repair ticket; download invoices and HUID/certificate records • Update profile, contact details and marketing consent
Data Stored	• Customer profile and preferences • Purchase and reservation history, wishlist • Appointment records, scheme enrolments and payment history • Loyalty ledger, repair tickets, consent and communication log
Approvals Required	Self-service by default; refund, cancellation or exchange requests route to the store for approval
Notifications Triggered	• Order / appointment status changes • Scheme instalment reminders; loyalty tier changes • Repair status updates; opt-in birthday / anniversary offers
Reports & Dashboards	• Customer-facing purchase history summary • Loyalty statement, gold-scheme statement
AI / Intelligence	• Conversational assistant for styling and product search • Personalised offers and next-best-action prompts (e.g. “your ring resizing is ready”)
Integrations	• CRM, Inventory (live availability) • Payment gateway, Loyalty and Scheme engines • Repair workflow, Push notifications (FCM/APNs), WhatsApp
Permissions & Access	Authenticated customer, strictly scoped to their own data — no cross-customer visibility

3. CRM

The customer-relationship layer used by sales and marketing to capture, qualify and act on every lead and every existing customer relationship.

Who Uses It	• Salespeople, Store Managers, Regional Managers • Marketing team (segmentation and campaigns)
Key Screens	• Unified lead inbox (by channel: website, WhatsApp, walk-in) • Customer 360° profile • Lead pipeline board (Kanban by stage) • Segment builder and campaign manager • Follow-up task list
What They Can Do	• Create, update and assign leads • Log calls, visits and other interactions • Move leads across pipeline stages • Build customer segments and launch campaigns • Schedule and complete follow-up tasks
Data Stored	• Leads (source, status, owner, history) • Customer master record linked to Customer 360 • Interaction logs, segments, campaign records, consent status
Approvals Required	• Campaign send requires Marketing Lead approval • Segments built on sensitive attributes require a review step
Notifications Triggered	• New-lead alert to the assigned salesperson • Overdue-follow-up alert; lead-response SLA breach alert to the manager
Reports & Dashboards	• Lead funnel and conversion by source, store and salesperson • Response-time report; campaign ROI
AI / Intelligence	• Lead scoring; next-best-action prompts • Churn / win-back flagging • Missed-lead detection (no response within SLA)
Integrations	• Website / App / WhatsApp (lead capture) • Sales module, Loyalty, Marketing automation tools • Email / SMS / WhatsApp gateway
Permissions & Access	• Salesperson — own assigned leads and customers

	• Store Manager — branch-wide visibility • Regional Manager — multiple branches • Marketing — segments and campaigns, with restricted access to sensitive PII fields
--	--

4. Sales

The in-store and remote selling workflow — from quotation to billing — built around transparency and a defined discount-approval chain.

Who Uses It	Salespeople, Store Managers, Billing staff
Key Screens	• Customer / product lookup • Quotation builder • Billing / POS screen • Sales dashboard (today / MTD) • Discount request screen
What They Can Do	• Generate an itemised digital quotation • Convert a quotation into a sale • Apply a discount within their authority, or request approval for more • Process payment and issue a digital invoice • Record an exchange / buyback transaction
Data Stored	• Quotations, invoices, payment records • Discount requests and decisions • Exchange / buyback transactions • Salesperson-to-customer mapping
Approvals Required	• Discounts beyond the salesperson's threshold → Store Manager / Regional Manager • Exchange deductions beyond the standard formula → manager approval
Notifications Triggered	• Quotation shared with the customer (WhatsApp / email / SMS) • Discount approval request and decision • Daily sales-target achievement alert
Reports & Dashboards	• Salesperson performance — conversion, average ticket, target achievement • Daily / MTD branch sales • Discount-usage report; exchange-volume report
AI / Intelligence	• Sales copilot — surfaces customer insight and matching in-stock products • Quotation-to-purchase conversion signals • Discount-effectiveness flagging
Integrations	• Inventory (live availability and reservation) • Gold Rate Engine, CRM • Finance / Accounting, Payment gateway, Loyalty engine

Permissions & Access

- Salesperson — create quotations / sales for assigned customers
- Store Manager — approve discounts, view branch sales
- Finance — read-only access to sales and payment data

5. Inventory

The system of record for every physical item — the jewellery Digital Passport in operation, from receipt through vault, showcase, sale and any after-sales event.

Who Uses It	• Inventory staff, Store Managers • Corporate Inventory team, Auditors
Key Screens	• Product master • Stock list by branch and status • Vault / showcase view • Transfer request & approval screen • Stock reconciliation screen, Ageing report
What They Can Do	• Add / update a product record (SKU, weight, purity, HUID) • Change item status (available, reserved, in transit, vault, repair, etc.) • Create and approve inter-store transfers • Conduct physical stock reconciliation • Move items between vault and showcase locations
Data Stored	• Full product master (digital passport fields) • HUID / hallmark records • Stock-status log and movement history • Vault / locker / tray mapping • Reconciliation and ageing records
Approvals Required	• High-value transfer → dual authorisation plus manager approval • Stock write-off or damage → manager and finance approval
Notifications Triggered	• Low-stock alert • Transfer created / approved / dispatched / received • Reconciliation-discrepancy alert; ageing-threshold alert (e.g. 180+ days)
Reports & Dashboards	• Stock valuation by branch and category • Fast-moving, slow-moving and dead-stock report • Ageing report; transfer log; discrepancy report
AI / Intelligence	• Demand-based transfer recommendations • Dead-stock detection; showcase-placement suggestions • Anomaly detection on unusual movements
Integrations	• Procurement (goods receipt)

	• Sales (reservation / sale status updates) • Franchise inventory, Finance (valuation) • Barcode / QR / RFID scanning devices
Permissions & Access	• Inventory staff — branch-scoped edit rights • Store Manager — branch approvals • Corporate Inventory — network-wide view • Auditor — read-only plus reconciliation entry

6. Branch Management

The operating layer for a single showroom — staffing, targets, service quality and the branch health score that feeds the Management Command Center.

Who Uses It	Store Managers, Regional Managers, Corporate Operations
Key Screens	• Branch digital-twin dashboard • Staff roster / attendance view • Target vs. achievement screen • Complaint / service desk • Branch health-score detail view
What They Can Do	• Set and adjust branch targets (within authority) • Manage staff shift allocation • Resolve or escalate customer complaints • Review the drivers behind the branch health score • Request additional stock or staff
Data Stored	• Branch master data • Staff assignments and shift records • Target records, complaint tickets • Historical branch KPIs
Approvals Required	• Target changes → Regional Manager approval • Complaint escalation → Corporate review
Notifications Triggered	• Complaint SLA-breach alert • Target-at-risk alert; staffing-gap alert
Reports & Dashboards	• Branch performance scorecard • Branch-to-branch comparison report • Complaint resolution report
AI / Intelligence	• Explainable branch health scoring (contributing factors always visible) • Footfall / staffing forecast • Root-cause analysis on performance dips
Integrations	• Sales, Inventory, HR / Attendance • CRM (complaints), Management Command Center
Permissions & Access	• Store Manager — own branch only

	• Regional Manager — assigned branches • Corporate Operations — all branches
--	--

7. Franchise

The end-to-end franchise lifecycle — from public application through evaluation, agreement, onboarding and ongoing corporate oversight of an operating franchise.

Who Uses It	• Prospective franchisees (applicant) • WHPS Franchise and Legal team, Corporate Management • Franchise partner staff (post-approval)
Key Screens	• Public franchise-opportunity page and application form • Applicant portal (status tracker) • Admin evaluation dashboard and location-intelligence view • Partner portal (post-approval operations)
What They Can Do	• Applicant: submit application, documents and location details; track status • Corporate: screen, score, interview, approve or reject • Corporate: generate and manage the digital agreement • Corporate: track onboarding checklist through go-live • Partner: manage sales, inventory and staff within the franchise's scope
Data Stored	• Applicant profile, business and financial details • Proposed location data and documents • Scorecards and interview notes • Agreement records; franchise-level inventory and sales data
Approvals Required	• Eligibility exceptions; final approval by Corporate Management • Agreement terms by Legal; pricing / discount exceptions
Notifications Triggered	• Application-status updates to the applicant • Document-verification-pending alert; interview scheduled • Approval decision; agreement-renewal-due alert
Reports & Dashboards	• Franchise pipeline funnel • Franchise performance and health score • Franchise-to-franchise comparison; risk dashboard
AI / Intelligence	• Location / market-opportunity scoring; cannibalisation check • Applicant-fit scorecard (explainable) • Expansion intelligence — where WHPS should franchise next
Integrations	• Central Inventory (allocation) • Finance (royalty / fees, where applicable)

	• HR / Training (WHPS Academy), CRM, Document OCR / verification
Permissions & Access	• Applicant — own application only • Franchise Admin / Legal — evaluation and agreements • Corporate Management — approval authority • Franchise partner staff — scoped strictly to their own store

8. HR + Recruitment

One engine covering the full employee lifecycle — careers portal, criteria-based screening, assessments and interviews, through to onboarding and ongoing HR operations.

Who Uses It	Candidates, HR team, Interviewers / Hiring Managers, Employees
Key Screens	• Careers portal and job listings • Role-specific application form • Candidate pipeline (Kanban) • Assessment engine, Interview scorecard • Candidate portal (status tracker) • Employee 360° profile; attendance, leave and payroll screens
What They Can Do	• Candidate: apply for a job or internship, track status • HR: screen, shortlist, schedule assessments and interviews • Interviewer: submit a structured scorecard • HR: generate offer, verify documents, onboard the candidate • Employee: apply for leave, view payslip, complete training
Data Stored	• Candidate profile and resume data; eligibility criteria • Assessment scores; interview scorecards • Offer and document records • Employee master (post-joining); attendance, leave, performance and payroll data
Approvals Required	• Offer approval — HR Head / Department Head • Document verification sign-off; leave approval by reporting manager
Notifications Triggered	• Application received; assessment / interview scheduled and reminders • Status updates at every pipeline stage; offer issued • Onboarding task reminders; leave-approval status
Reports & Dashboards	• Recruitment funnel and source analytics • Time-to-hire, cost-per-hire, assessment pass rates • Attendance / leave summary; training completion
AI / Intelligence	• Resume parsing and explainable criteria matching • Suggested interview questions; candidate-fit summary • Recruitment analytics correlations, applied with governance and never used to rank on protected characteristics
Integrations	• Careers site, Assessment engine, Document OCR / verification

	• Payroll system • Auto-creates the employee ID and branch assignment on joining • Training / WHPS Academy
Permissions & Access	• Candidate — own application only • Interviewer — assigned candidates only • HR — full recruitment and employee data, access-controlled by sensitivity • Employee — own attendance, leave and payslip only

9. Finance

The financial visibility layer that consolidates sales, inventory value, discounts and franchise fees, integrating with — rather than replacing — WHPS's existing accounting system.

Who Uses It	• Finance / Accounts team, Corporate Management • Store Managers (limited, branch-level view)
Key Screens	• Revenue and margin dashboard • Payables / receivables view • Discount and refund monitor • Inventory valuation view • Branch profitability report; royalty / fee tracker (franchise)
What They Can Do	• Reconcile sales with the accounting system • Approve or flag refunds beyond threshold • Review discount patterns and outstanding payments • Generate financial reports for leadership
Data Stored	• Sales / payment records (from Sales module) • Refunds and returns, discount logs • Inventory valuation, payables / receivables • Franchise royalty / fee records
Approvals Required	• Refunds beyond threshold; inventory write-offs • Royalty / fee exceptions
Notifications Triggered	• Payment-overdue alert • Unusual-discount-pattern alert • Reconciliation-mismatch alert
Reports & Dashboards	• P&L inputs by branch and product; margin analysis • Capital-locked-in-inventory report • Discount and refund analytics
AI / Intelligence	• Discount-effectiveness flagging • Margin-risk detection (high revenue, low margin products) • Anomaly detection on refunds and discounts
Integrations	• Sales, Inventory (valuation) • External accounting / ERP system (two-way sync) • Franchise (royalty), Procurement (payables)

Permissions & Access

- Finance team — full access, role-scoped
- Store Manager — branch-level view only
- Corporate Management — consolidated network view

10. Procurement

Sourcing and purchasing, connected directly to demand signals from Inventory and the AI Intelligence layer rather than running as a standalone buying function.

Who Uses It	• Procurement team, Store / Regional Managers (requests) • Vendors (optional external portal)
Key Screens	• Purchase requisition screen • Vendor master and scorecard • Purchase order screen • Goods-receipt and QC screen • Procurement dashboard
What They Can Do	• Raise a purchase requisition (manual or demand-triggered) • Select a vendor and issue a purchase order • Record goods receipt and log QC pass / fail • Rate vendor performance
Data Stored	• Requisitions, vendor master • Purchase orders, goods-receipt records • QC records, vendor performance history
Approvals Required	• PO approval above threshold — Regional Manager / Finance • Vendor onboarding approval
Notifications Triggered	• PO issued / received alerts • QC-failure alert; vendor delivery-delay alert
Reports & Dashboards	• Procurement spend by vendor and category • Vendor performance comparison • Lead-time report; QC-failure trends
AI / Intelligence	• Reorder recommendations from demand forecasting • Vendor risk scoring (rising late-delivery trend) • Price-comparison insights across vendors
Integrations	• Inventory (goods receipt updates stock) • Finance (payables) • Demand Forecasting (AI layer), vendor communication channel
Permissions & Access	• Procurement team — full module access

	• Store / Regional Managers — raise requisitions only • Finance — payables view
--	---

11. Repairs

A ticketed workflow from intake to delivery, with a defined SLA at every stage and full visibility for the customer throughout.

Who Uses It	• Customers (via app / store), Store staff • Workshop / Karigar, Service Manager
Key Screens	• Repair-ticket intake screen • Repair tracking board (by stage) • Customer repair-status view • SLA dashboard
What They Can Do	• Log a repair request; inspect and provide an estimate • Capture customer approval of the estimate • Assign the job to a karigar / workshop • Update the repair stage; mark ready and deliver; close the ticket
Data Stored	• Repair tickets (product, issue, estimate, dates) • Customer approval records • Karigar assignment, SLA timestamps
Approvals Required	• Repair estimate → customer approval • Cost beyond the standard range → manager approval
Notifications Triggered	• Ticket created / status changed • SLA-nearing-breach alert • Ready-for-pickup notification to the customer
Reports & Dashboards	• Average repair time by branch and type • Overdue repairs; repeat-repair categories • Repair volume trends
AI / Intelligence	• SLA-risk prediction • Repeat-issue pattern detection • Workload balancing suggestions across karigars
Integrations	• Customer app / CRM (status sync) • Inventory (item status = “under repair”) • Karigar / Workshop module, WhatsApp / SMS notifications
Permissions & Access	• Customer — own ticket only

	• Store staff — branch tickets • Karigar — assigned jobs only • Service Manager — network-wide repair oversight
--	---

12. Custom Jewellery

The bespoke-order workflow, from customer brief through material allocation, production and quality control to final delivery.

Who Uses It	• Customers, Salespeople • Designers, Karigars, Quality team
Key Screens	• Custom-order intake (brief plus reference images) • Design and estimate screen • Production job-card • QC checklist • Customer approval / tracking view
What They Can Do	• Capture the customer's requirement and references • Create a design brief and estimate; get customer approval • Allocate gold / material and assign a karigar • Track production stages through QC sign-off • Generate final billing and arrange delivery
Data Stored	• Custom-order brief and design files • Estimates; material allocation (gold issue / return) • Job-card status; QC records
Approvals Required	• Estimate approval by the customer • Material allocation approval by the Store Manager • Final QC sign-off
Notifications Triggered	• Order-stage updates to the customer • Material-variance alert; QC-fail alert
Reports & Dashboards	• Custom-order volume and turnaround time • Material wastage / variance report • Conversion rate from brief to confirmed order
AI / Intelligence	• Material variance / wastage anomaly detection • Turnaround-time prediction • Design-trend insight from customer briefs
Integrations	• Inventory (gold / material allocation) • Karigar / Workshop module • Sales (final billing), CRM

Permissions & Access

- Customer — own order status only
- Salesperson — assigned orders
- Designer / Karigar — assigned jobs
- Quality team — QC sign-off authority

13. Vendors / Karigars

Supplier and workshop management, including the gold issue-and-return ledger that keeps manufacturing wastage visible and accountable.

Who Uses It	• Procurement team, Production Manager • Karigars (job-card access only)
Key Screens	• Vendor master • Karigar master and job-assignment board • Gold issue / return ledger • Quality and performance scorecards
What They Can Do	• Onboard a vendor or karigar • Assign job cards; issue gold / material • Record returned material and wastage • Rate performance
Data Stored	• Vendor / karigar profiles • Job-card history • Gold issue / return ledger • Performance ratings and quality records
Approvals Required	• Vendor onboarding • Wastage beyond agreed tolerance → manager review
Notifications Triggered	• Job assigned / due-date approaching • Wastage-variance alert • Vendor contract-renewal due
Reports & Dashboards	• Karigar productivity and turnaround • Wastage trend by karigar / vendor • Vendor scorecard comparison
AI / Intelligence	• Wastage anomaly detection • Job-completion-time prediction • Vendor risk scoring
Integrations	• Custom Jewellery module, Procurement • Inventory (material tracking), Finance (vendor payments)
Permissions & Access	• Procurement / Production Manager — full access

	• Karigar — own assigned jobs only
--	--

14. Management Command Center

The single leadership view over the entire network — a read layer over every other module, not an independent source of data.

Who Uses It	Directors, Regional Managers, Department Heads
Key Screens	• Executive dashboard (network status, health indicators) • Branch / franchise comparison view • Daily and weekly AI brief • Drill-down views into any module
What They Can Do	• Review network KPIs at a glance • Drill into any branch, franchise or module • Approve high-value cross-module recommendations routed here (e.g. large transfers) • Export reports
Data Stored	No independent data — aggregated read access across every module via the Central Data Platform
Approvals Required	Cross-module, high-value approvals may be actioned from here when routed to this role (e.g. large inventory transfer, major discount exception)
Notifications Triggered	• Daily and weekly executive brief • Risk and opportunity alerts • Summary of approvals pending across the network
Reports & Dashboards	The full BI suite — sales, inventory, HR, franchise, finance and customer, fully consolidated
AI / Intelligence	• Executive AI copilot for natural-language queries • Root-cause analysis on performance shifts • Opportunity and risk detection; automated daily brief
Integrations	Reads from every module through the Central Data Platform; no separate data entry
Permissions & Access	Director / Regional Manager / Department Head roles only, scoped to their assigned branches or departments

15. AI Intelligence Layer

A cross-cutting capability, not a single screen — it feeds recommendations into every module above and is governed by a strict human-in-the-loop rule for anything high-value or regulated.

Who Uses It	• Consumed by every module (customer-facing assistant, sales copilot, executive AI) • Configured and monitored by Corporate / Admin
Key Screens	• AI configuration console (thresholds, confidence settings) • Recommendation review queue (human-in-the-loop approvals) • Model performance / monitoring dashboard
What They Can Do	• Configure recommendation thresholds and confidence levels • Review, approve or reject each AI-generated recommendation • Monitor model accuracy and drift over time
Data Stored	• No duplicated data — model inputs are sourced live from the Central Data Platform • Recommendation logs; approval / rejection outcomes (feedback loop)
Approvals Required	Every recommendation touching inventory, pricing, discounts or customer communication requires human approval before it takes effect — by design, with no exceptions
Notifications Triggered	• New recommendation ready for review • Model-confidence-drop alert
Reports & Dashboards	• Recommendation acceptance rate • Impact report on AI-driven actions actually taken • Model accuracy monitoring
AI / Intelligence	This is the intelligence layer itself — demand forecasting, root-cause analysis, lead scoring, churn detection, anomaly detection, location intelligence, executive copilot
Integrations	Reads from the Central Data Platform across all modules; writes recommendations back to the relevant module's review queue (Inventory, CRM, Franchise, etc.)
Permissions & Access	• Corporate / Admin — configure thresholds and models • Relevant module owners — review and approve recommendations within their own module's scope only

16. Central Admin

The foundation layer underneath every module — identity, roles, master data and the audit trail that makes every other module trustworthy.

Who Uses It	Super Admin, IT / Platform team, Department Admins
Key Screens	• User and role management • Master data management (products, branches, categories, tax rules) • Approval-chain configuration • Audit log viewer, system settings and integrations config
What They Can Do	• Create and manage user accounts and roles • Configure master data • Set up and edit approval chains • Review audit logs; configure integrations (payments, WhatsApp, accounting system, etc.)
Data Stored	• User accounts and the role-permission matrix • Master data tables • Approval-chain configuration • Full audit trail — who, what, when, before/after value
Approvals Required	Role or permission changes for sensitive roles should carry dual sign-off
Notifications Triggered	• Failed-login / security alerts • Master-data change alerts • Audit-flagged anomaly alerts
Reports & Dashboards	• User activity report • Audit log exports • Data-quality report (duplicates, missing fields)
AI / Intelligence	• Data-quality detection (duplicate customers / products) • Security anomaly detection
Integrations	Underpins every other module — identity, roles, master data and audit are the foundation layer the rest of the platform is built on
Permissions & Access	• Super Admin — full platform access • IT / Platform team — technical configuration • Department Admins — scoped master-data management only

17. Using This Specification

This document is intended to sit directly alongside the WHPS Digital Enterprise Platform proposal and be used as the working reference once development begins.

Suggested Next Actions

- Validate each module's "Who Uses It" and "Permissions & Access" rows against WHPS's actual organisational roles during discovery.
- Confirm the "Approvals Required" thresholds (discount limits, transfer values, refund amounts) with WHPS finance and operations leadership — these are placeholders for policy WHPS must define.
- Use the "Data Stored" rows across all sixteen modules to derive the Central Data Platform's entity-relationship model before any module-level build starts.
- Sequence build order using the "Integrations" rows — modules with the fewest dependencies (e.g. Central Admin, Inventory) should be built first, since later modules assume they exist.
- Treat every "AI / Intelligence" row as an enhancement layer on top of a working module — build the underlying screens, data and approvals for a module first, then layer AI recommendations on top; AI augments a working module, it does not replace one.
